Brooks Roley

Software Engineer · Orange County, CA

brooksroley@gmail.com
linkedin.com/in/brooksroley · github.com/brooksroley · brooksroley.com

Full-stack software engineer with ten years across healthcare, e-commerce and fintech, specializing in user interfaces. I build fast, accessible front ends in React, Vue and TypeScript and the Python and Node services behind them, and have led framework migrations, product work, and WCAG and HIPAA compliance.

EXPERIENCE

Independent — Software Engineer — 2025 – Present

- Built a bilingual intake system for Centerpointe for Children, a pediatric therapy clinic. Answers are encrypted in the browser (RSA-OAEP, AES-256-GCM), so the server and inbox hold only ciphertext.
- Spent the past year learning to build with AI coding agents (Claude Code) on this site: Next.js, TypeScript and PostgreSQL. A scheduled agent opens pull requests, CI runs 1,700+ tests and Lighthouse on each one, and I review every change before I merge it.
- Built Hardwood Autochess, an NBA auto-battler: a C++ simulation engine compiled to WebAssembly under a Vue 3 client. Its Electron launcher ships only changed chunks (16 KB of a 1.07 MB build for a one-line change), with verified, resumable installs and rollback.

Zoox — Software Engineer (contract) — September 2024 – March 2025

- Owned the Site Reliability team's OnCall notification system: Vue and Vuetify, Python and FastAPI, AWS, OpsGenie, Slack, Terraform, HashiCorp Vault and Grafana.
- Integrated the 'Zoox Intelligence' AI into the OnCall app and its Slack bot.

2022 – 2024 — Family leave: caring for my father at the end of his life, and a move from the Bay Area to Orange County.

Grove Collaborative — Software Engineer II — 2019 – 2022

- Full-stack engineer on a Django and Vue e-commerce platform, and Scrum Lead across teams focused on discovery, personalization and engagement.
- Led a homepage personalization service on AWS SageMaker for 1.5M+ active customers, responding in 150ms through caching and async workflows.
- Led the migration from Backbone.js to the Vue Composition API and Vue Router, and unified the product tiles into one data-fetching path, for faster loads and smaller bundles.
- Partnered with accessibility firm A360 to lead site-wide WCAG remediation.

Zipongo (now Foodsmart) — Senior Associate and Software Engineer — 2017 – 2019

- Led front-end development of role-based access control interfaces in React, Redux and Node.js with SAML single sign-on, built to HIPAA requirements.
- Designed and built the provider tools for creating and managing personalized nutrition plans, integrated with backend recipe services.

SigFig — Front End Software Engineer — 2016 – 2017

- Built Angular and TypeScript interfaces for banking partners including Wells Fargo, with accessibility, internationalization and a behavioral analytics layer.

Limelight Health — Software Engineer — 2015 – 2016

- Early hire at a startup FINEOS later acquired for $75M. Built Node.js quoting APIs and the PDF service (PHP, D3.js) that charted insurance costs.

SKILLS

Front end and rendering
TypeScript, JavaScript, React, Next.js, Vue, Angular, Tailwind CSS, Canvas 2D, PixiJS, D3.js, WebAssembly (Emscripten)

Back end and state
Node.js, Python, Django, FastAPI, PostgreSQL, Supabase Realtime (WebSockets), MySQL, SQLite, Redis, Memcached, Snowflake, Celery

Engine and desktop
C++, Electron

Automation and tooling
Claude Code, LLM API integration (Vercel AI SDK), Reviewing and testing agent-written code, CI/CD with GitHub Actions: tests and Lighthouse on every pull request

Infrastructure and monitoring
AWS (S3, SageMaker), Docker, Kubernetes, Terraform, Vercel, Git, Bash, Webpack, Datadog, Grafana

Accessibility and standards
WCAG, HIPAA, SSO/SAML, A/B testing

EDUCATION

Sonoma State University
Bachelor of Science, Computer Science, 2013
